

\$5 X 2 X 3 X 7 X 52 X 25

equals

\$ 273,000 !!

That's right.

**At just \$5 per meal,
if two people spend this much
for three meals a day,
seven days a week,
52 weeks a year,
for 25 years in retirement,
it will cost over
a quarter of a million dollars
just to eat!**

No frills! After taxes!

And not even accounting for inflation!

Are *YOU* saving enough for retirement?
